About me

Hard-working and self-taught front-end developer that uses React environment and other technologies to achieve lasting results for customers. During my journey I managed to handle 6hs to 8hs studying per day, assuming like it was my job; the results were me being more committed and acquiring a lot more knowledge in web development.

Professional experience

October 2022 - November 2022

Front-end developer, *Fixedbsas*

A company which provides repair services for apple devices in Buenos aires, Argentine:

- Several meetings with customers talking about design and functionalities.
- Took care of the design, oriented on user experience.
- Built reusable and maintainable code with responsive and usable design.
- Made an email system for incoming consults from clients, and email design for confirm status.

July 2022 - August 2022

Front-end developer, *Tu espacio limpio*

A company that provides cleaning services for hundreds of people in Buenos Aires, Argentine:

- Built code reusable and maintainable in React and Javascript.
- Built a responsive and usable website.
- Worked between design and development for making sure that all was like the customer wanted.
- Established meetings with customers to ensure all was in order.

Skills

REACTJS   TAILWIND   NEXTJS   TYPESCRIPT   HTML5   CSS3   JAVASCRIPT   GIT

- Improving my knowledge of Next.js and typescript.
- Solving leetcode problems for Data structure and Algorithms.
- Taking English private lessons to achieve more fluency, since November 2022.

Projects

Typescript - Nextjs - TailwindCSS - API (Crypto prices - Devthereum)

Did a project where you can display prices from different cryptocurrencies, this was made to use typescript with next.js on an API, where I understand the usage of getStaticProps, getStaticPaths, and many other properties from next.js

Typescript - Reactjs- TailwindCSS (Todo list)

Did a todo list where you can add, delete, edit and use local storage to save your tasks; here I achieved to learn typescript type their usages and got more in-depth with React hooks, also used React-Beautiful-dnd where I managed to create a drag and drop.

Reactjs - Redux@Toolkit - React RouterV6 - Mantine UI (Movie displayer)

Did a project where I used several technologies oriented on React environment as previously mentioned, here I achieved control of the usage of API with promises and asynchronous functions, used Redux for state management, and router for multiple routes.

Education

IRSO, Instituto Raul Scalabrini Ortiz (Current)
Technician in system analyst.

Mariano Moreno, Secondary School
